2. Outcomes	4
2.1 Information on EU-Russia cooperation activities	4
2.2 Assistance for Consortium Building	4
2.3 Individual Matching Process	7
2.3.1 Follow-up on E-URAL workshops, trainings and brokerage events	7
2.3.2 E-URAL Partnering Outcomes (Overview)	9

1. Introduction - WP 4, Task 4.4: Individual match making and assistance for consortium building (OWWZ)

Assistance in consortium building was the main objective of WP 4.4. This implied the collection of information on key cooperation activities between the European Commission as well as individual EU member states with Russia and institutions in the EU interested in collaboration with Russia in FP7 Environment. The process of individual match making implied assistance to Russian researchers willing to participate under FP7-ENV by web-based tools and personal assistance.

The main objective of this deliverable is to present an updated overview of the activities promoted and realized in the second part of the project aimed at supporting the creation of new EU-Russia research consortia (the activities performed during the first year have been already presented in deliverable D14).

2. Outcomes

2.1 Information on EU-Russia cooperation activities

In compliance with these objectives, the following information has been collected in the period 8/2009 – 7/2010 (see documentation in Deliverable D 14):

1. Link Collection “Key Cooperation Activities EU-Russia”
 - EU-Russia Networking Projects
 - EU-Russia Funding Programmes
 - EU-Russia Policy Documents
2. EU-Russia Cooperation Activities
 - Funded projects with Russian participation in FP7-ENV
3. Search Engines: Institutions in EU interested in Collaboration with Russia in FP7
4. Individual assistance / support service (web-based)

2.2 Assistance for Consortium Building

In the period 8/2010 – 12/2011 the following deliverables were generated:

1. Implementation of a Web-based Communication Tool for project consortia

A new **closed forum** has been installed on the E-URAL website (Figure 1) for potential FP7 partners and E-URAL project partners for discussion and parting of any important information. In order to communicate within this forum, partners have to register on:

<http://www.e-ural.vsu.ru/en/register>.

All abovementioned data and information were implemented in the E-URAL website.

Figure 1. Access to the forum on E-URAL website.

2. Matching CORDIS Partnering Database and E.URAL Database

OWWZ conducted a search on EU Cordis Project Partner Database looking for project proposals by European scientists. A letter was sent to 115 European scientists in the Cordis database FP7 ENV with general information on the E-URAL project and the database on Russian experts. The EU experts were invited to use the database in order to integrate Russian experts in FP7 consortia building.

Partner Search FP7-ENV Calls 2011

Dear colleague,

You published a search for partners on the CORDIS website.

We are partners in an EU project working on optimization of integration of Russian experts into FP7 Environment programme (see www.e-ural.vsu.ru/en/). Referring to the latest calls for 2011 we would like to offer to you the possibility to use the new installed database on Russian experts looking for EU partners in the fields of environment. You can search for Russian partners easily according to the FP7 ENV programme structure (<http://www.e-ural.vsu.ru/en/uforms/appforms/search>).

If you are interested in further support, please let us know. We will gladly give you more information or find additional partners, if needed.

With best regards

Dr. Gabriele Gorzka

2.3 Individual Matching Process

2.3.1 Follow-up on E-URAL workshops, trainings and brokerage events

OWWZ was responsible for the follow-up of E-URAL matching activities for consortia building. Letters with questionnaires were sent to all participants of E-URAL workshops, trainings and brokerage events. A final follow-up addressed all people in the E-URAL database. Follow-up activities were organised in March 2010, August 2010, September 2010, November/December 2010, August 2011, November/December 2011.

The questionnaire was designed by OWWZ in close cooperation with of IDEAS and CBS RIC. Among general data (e.g. name, institution etc), the main questions of this questionnaire were concentrated on the development of joint EU-Russia activities in FP7:

- Have there been joint activities developed out of the first meeting like further communication concerning cooperation ideas?
- Have there been joint activities developed out of the first meeting like practical steps of joint actions for bilateral projects?
- Have there been joint activities developed out of the first meeting like joint work on preparation of FP7 project applications or twinning projects?
- Has a joint project proposal been submitted?
- Was the project application approved by the funding institution, especially FP7?

While OWWZ distributed the questionnaires to all European participants of the E-URAL workshops and brokerage events as well as the Russian participants of the brokerage events, the Russian partners sent the questionnaire to all Russian participants of the workshops and trainings as well as the people contained in the E-URAL database (CBS RIC). In total 683 people were addressed of whom 351 are contained in the E-URAL database, 83 people participated in the workshops and trainings and 271 in the brokerage events (Figure 2).

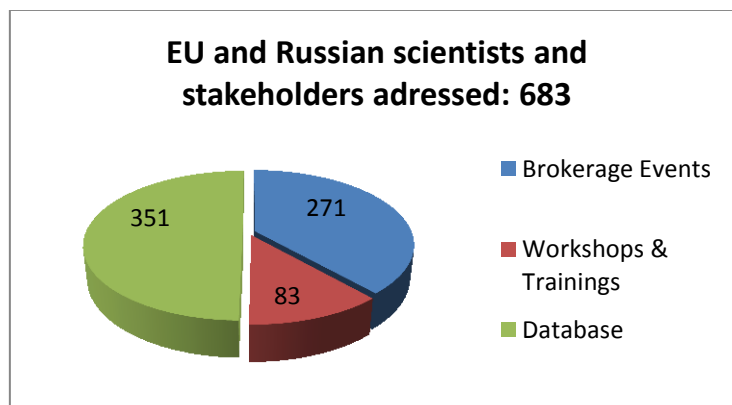

Figure 2. Chart representing the number of researchers addressed after E-URAL events or using the contacts collected in E-URAL database.

Analysis of the gathered data:

All people addressed were asked to send back the questionnaire to OWWZ. In total, 51 questionnaires were collected till 20 December 2011.

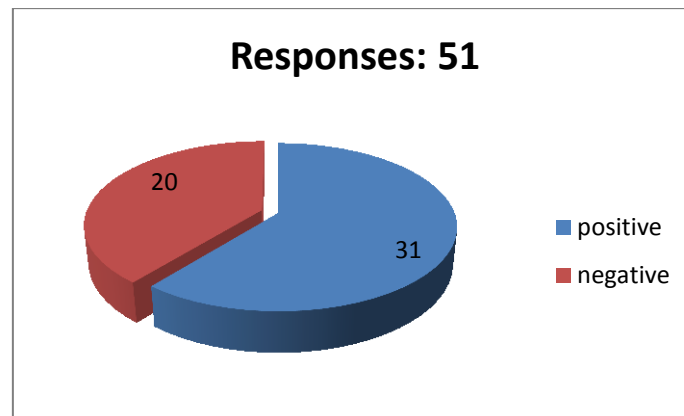

Figure 2. Chart representing the percentage of positive and negative answers in the questionnaires received by OWWZ from the contacted researchers.

The answer was classified as positive when the prospective partners are at least in the process of project preparation. An answer was clarified as negative if there was some communication but clearly stated that no further collaboration initiative has taken place or there was no appropriate answer at all. The percentage of positive and negative answers is illustrated in Figure 2.

Within the positive answers three kinds of collaboration initiative were defined:

- Approved projects
- Submitted applications
- Project preparation

We can conclude from the feedback of the questionnaires that in the course and on the initiative of the E-URAL project 7 projects have been approved, 6 project applications have been submitted and 14 people stated to be in the project preparation phase with prospective partners. The results are listed in the following paragraph.

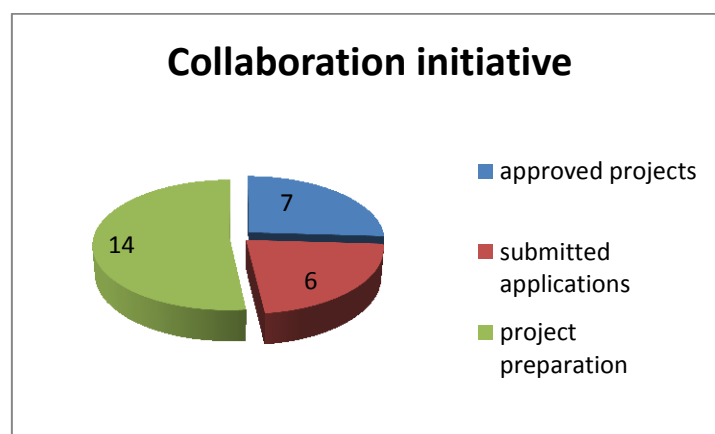

Figure 3. Graph representing the number and typologies of EU-Russia collaboration initiatives as monitored through the questionnaires.

2.3.2 E-URAL Partnering Outcomes (Overview)

The tables on “E-URAL Partnering outcomes” are structured in the following sections:

1. Approved projects
2. Submitted applications
3. Project preparation
4. Without further action

The tables contain the following information:

- Institution
- Participating experts
- Classification: stakeholder or researcher
- Point of contact
- Collaboration initiative / status of project
- Funding programme / title of the project
- EU/Russia Consortia partners
